

Inter-agency Wild Bird Avian Influenza Survey Update

A report of samples collected and tested as of November 3, 2025

PLEASE NOTE: The data displayed in the following report are the most recent AIV **PRELIMINARY** test results provided to the CWHC by participating program partners unless otherwise stated. All survey numbers are displayed for the current calendar year.

DEAD BIRD SURVEY 2025

Number of birds tested and number matrix positive* since January 1, 2025

Region	October 21-November 3, 2025		Year to Date		
	Tested	Matrix Positive*	Tested	Matrix Positive*	H5 Positive*
British Columbia	0	0	0	0	0
Alberta	84	69	619	248	189
Saskatchewan	21	16	229	55	37
Manitoba	16	16	140	35	34
Ontario	46	15	930	243	243
Quebec	7	2	175	17	15
New Brunswick	0	0	90	4	3
Nova Scotia	10	0	241	47	45
Prince Edward Island	1	0	53	18	15
Newfoundland & Labrador	0	0	3	0	0
Yukon Territory	0	0	10	0	0
Northwest Territories	0	0	30	1	1
Nunavut	0	0	0	0	0
Total	185	118	2520	668	582

*Matrix positive includes all birds that tested 'not negative' by PCR for one or more Influenza A viruses. The number of positive test results included both those birds that tested POSITIVE (Ct value less than 36) and those that had an INCONCLUSIVE test result (Ct value greater than or equal to 36).

Any samples found to be matrix POSITIVE or INCONCLUSIVE are then tested by PCR for H5 and H7 strains at the regional level. Any samples that are then found to be either H5 or H7 POSITIVE or INCONCLUSIVE are immediately sent to the NCFAD for confirmation and identification. Authorities from the province or region where the bird was sampled will be notified when preliminary H5 or H7 positive results are found at the regional lab. When the CFIA confirms and identifies the virus, authorities from across the country will be notified. This update reports all POSITIVE or INCONCLUSIVE **PRELIMINARY** matrix results unless otherwise stated.

For confirmed presence of High Pathogenic Avian Influenza (HPAI), subtype H5N1 and H5N5, please visit the CFIA dashboard. You can visit the dashboard here: [CFIA Dashboard](#)

LIVE BIRD SURVEY 2025

Number of live birds tested and number matrix, H5 and H7 PCR positive* since January 1, 2025

Region	Tested	Matrix Positive*	H5 Positive*	HPAI**
British Columbia	17	0	0	0
Alberta	610	172	0	0
Saskatchewan	200	17	0	0
Manitoba	1089	219	1	0
Ontario	351	15	12	6
Quebec	184	2	0	0
New Brunswick	134	26	1	0
Nova Scotia	310	61	38	31
Prince Edward Island	344	17	10	1
Newfoundland & Labrador	171	8	7	4
Yukon Territory	0	0	0	0
Northwest Territories	0	0	0	0
Nunavut	225	0	0	0
Total	3635	537	69	42

* Matrix positive includes all birds that tested 'not negative' by PCR for one or more Influenza A viruses. The number of positive test results included both those birds that tested POSITIVE (Ct value less than 36) and those that had an INCONCLUSIVE test result (Ct value greater than or equal to 36).

****The CFIA has confirmed the presence of High Pathogenic Avian Influenza (HPAI), subtype H5N1.**

Any samples found to be matrix POSITIVE or INCONCLUSIVE are then tested by PCR for H5 and H7 strains at the regional level. Any samples that are then found to be either H5 or H7 POSITIVE or INCONCLUSIVE are immediately sent to the NCFAD for confirmation and identification. Authorities from the province or region where the bird was sampled will be notified when preliminary H5 or H7 positive results are found at the regional lab. When the CFIA confirms and identifies the virus, authorities from across the country will be notified. This update reports all POSITIVE or INCONCLUSIVE **PRELIMINARY** matrix results unless otherwise stated.

This information as well as historical data are available on the CWHC AIV portal at: http://www.cwhc-rscf.ca/avian_influenza_testing_results.php

GLOSSARY OF TERMS

Tested - The number of birds that were screened for avian influenza virus by real time reverse transcriptase PCR (RRT-PCR) for the M1 gene.

Matrix positive - The number of birds that tested positive for the M1 gene by RT-PCR.

H5 positive - The number of birds that tested positive for the H5 virus subtype by RT-PCR.

H7 positive - The number of birds that tested positive for the H7 virus subtype by RT-PCR.

HPAI - Confirmed at the CFIA NCFAD laboratory to be positive for highly pathogenic avian influenza through virus isolation or sequencing.
